“From the RHBC Health Ministry”

October is National Breast Cancer Awareness Month

It's been a difficult time for everyone & cancer hasn't stopped, even for a global pandemic. We must continue the fight against breast cancer. Breast cancer occurs in both men & women. Approximately 2,100 men in the US receive breast cancer diagnoses each year & it is the 2nd leading cause of cancer deaths in women. It is important to do regular self breast exams. If any unusual changes are noticed, one should report changes & get a mammogram as ordered. Mammograms are recommended at 40 or sooner if a family history. Early detection can catch the disease when it is most treatable. There are life style choices one can make which may reduce the chances of getting the disease; such as weight control, reduced alcohol use, regular exercise & regular breast screening. Keeping All scheduled appointments are still very important during the pandemic. One must be compliant with the CDC guidelines of social distancing, wearing a mask & frequent hand washing. People with serious health conditions like breast cancer, have a higher risk of severe illness if they get Covid. They should receive priority for the vaccine as a part of this Breast Cancer Awareness Month of October.
