“From the RHBC Health Ministry”

December is Disease Prevention/Health
Promotion Month

It is likely that the Flu viruses & the COVID-19 virus will continue to spread throughout the Fall & Winter seasons. The Pfizer Covid vaccine is now recommended approval for everyone ages 5 years & older & the Booster shot for all adults ages 18 & older. Healthcare systems are already overwhelmed, treating both patients; A reason why also getting the Flu vaccine as well is more important than ever. It will not protect against COVID, but it can reduce the severity of symptoms & incidences of hospitalization & death. The major 7 Flu symptoms include: fever, chills, body aches, cough, sour throat, headache & fatigue. COVID-19 can include these; PLUS loss of taste or smell, diarrhea/vomiting & breathing difficulties. We must continue to commit to health promotion & disease prevention by practicing a healthy lifestyle with daily devotion, getting enough sleep, eating mindfully, exercising regularly & following the CDC precautions in this month of December & Just note: it is not too late to get the flu shot in addition to the Covid vaccine to protect yourself & others.
